

# 《高阶 Perl》索引<sup>1</sup>

## Special Characters

"" (stringification) pseudo-operator, 312  
"" key, 334  
"\$" special variable, 174, 204  
"\$\$" special variable, 101  
"\$." special variable, 235  
"\$/" special variable, 174, 240  
"\$;" special variable, 55  
"\$;\$" prototype, 225  
"\$@" special variable, 287  
"\$\_" special variable, 93, 104  
"&" notation in Linogram, 330  
"&@" prototype, 225  
"&;@" prototype, 225  
"&&" @rest condition, 139  
"(?!)" regex lookahead operator, 242  
"\*" operator, 181, 259, 372  
\* quantifier, 291  
\* token, 251  
\*\* operator, 284  
+ operator, 372  
+ quantifier, 291  
+ token, 251  
-> operator, 116  
. operator, 116  
; symbol in prototypes, 118  
<...> operator, 123, 239–243  
  as rudimentary parser, 239  
<=> operator, 67, 71  
== operator, 111, 117  
  for comparing objects, 319  
? quantifier, 291  
@\_ modification of, 59–60  
[...] operator, 110  
\ (backslash) operator, 55, 57, 118, 293, 300  
\@\$\$ prototype, 195  
\@\@ prototype, 117  
| operator, 291  
||= operator, 70  
|| operator, 67

**A**  
-a command-line option, 98  
\$a and \$b variables, 230  
Abelson, Harold, x  
absolute zero 绝对零度, 317  
abstract base class 抽象基类, 17  
abstract syntax tree (AST) 抽象语法树, 37–38, 263, 267, 272, 292, 369–371  
abstraction of functionality 功能性提取, 11, 27, 149, 275  
accessor method 访问器方法, 19, 319

actions 行为, 29, 32–33, 35, 297  
Adler, David, 95  
agenda 安排表, 137–138, 243, 247, 254  
agenda method, universality of 安排表方法, 144  
aggregation 合计, 13  
airplane 飞机, 72  
algorithm 算法, 7, 8, 191, 315  
aliasing 别名, 53, 60  
alternate universe 另一个世界, 75–76  
alternation of parsers 交替, 259  
ambiguity in arithmetic expressions 数学表达式的歧义, 35  
amortization 分期还款, 207–209  
anchor component of URL; URL 的锚组成部分, 125  
anonymous array 匿名数组, 21, 32, 53  
anonymous functions 匿名函数, 13, 50, 52, 56, 80, 171–173, 200, 218, 247, 280, 302, 319  
  debugger's treatment of 除错器的处理, 277  
**argument isn't numeric**  
  warning, 71  
argument normalizer, inlined cache manager with 参数归一化, 内联的缓存管理, 59–60  
arithmetic expressions 算术表达式, 35, 251, 261–290  
  overview 概况, 261–267  
  calculator 计算器, 267, 283–285  
  debugging 除错, 277–282  
  generic-operator parsers 通用操作符解析器, 275–277  
  grammar 语法, 250  
  left recursive 左递归, 267–272  
arrays 数组, 43, 118, 119  
  contrasted with iterators 与迭代器对比, 76–77  
  contrasted with linked lists 与链表对比, 171  
  looping over 循环, 117–120  
  representation of database rows as 数据库行的表示, 108–109  
  repeated copying of 重复复制, 84  
**arrow**, definition in Linogram, 333  
Ashton, Elaine, 95  
assembly language 汇编语言, 210  
associativity of operators 操作符的结合性, 268, 284  
AST (abstract syntax tree) 抽象语法树, 37–38, 263, 267, 272, 292, 369–371

asymmetry, in Linogram parameter specifications, 373  
atomic expression 原子表达式, 291  
atomic features in Linogram, 330  
atomic ray, 122  
atoms in regexes 正则中的原子, 291, 293  
attribute-value pairs in HTML tags 在 HTML 标签中的属性一值对, 17  
automatic profiling 自动剖析, 73–74  
auxiliary parameter 辅助的形参, 160

## B

\b regex metacharacter, 181, 293  
backslash character 反斜杠字符, 55, 57, 118, 293, 300  
backtracking 回溯, 136, 304–310  
  in regex engine 在正则引擎中, 242  
backtracking parsers 回溯解析器, 304–310  
  overview 概况, 304  
  continuations 续篇, 305–308  
  parse streams 解析流, 308–310  
backup program 备份程序, 136  
bacteriophage 噬菌体, 88  
bad link detector 坏链接的检测器, 126–128  
bad luck 不幸, 111  
balanced parentheses 平衡的括号, 191–192  
barbarian 原始人, 136–137  
base case 基本型, 2, 3, 6, 139, 356  
bear, 239  
**BEGIN** block, 225–226, 230, 233–234, 236–238, 336  
beginner mode via alternative dispatch table 通过可选的分配表的初学者模式, 32  
behavior function in constraint system 约束系统中的行为函数, 320, 321  
Bell Labs, 375  
BFS (breadth-first search) 宽度优先搜索, 125, 132, 140–142  
binary 二进制, 1–2, 159–160  
binary search 二分搜索, 195  
binding 绑定, 47  
bio-informatics 生物信息学, 88–91  
Bird, Richard, x  
blessing, 238, 277, 311, 313  
blocks 块, 47–48, 260  
  bare 空的, 44

<sup>1</sup>本索引由译者根据原书索引制作。最新版可下载自：<http://hop.perl.plover.com/chinese.html>

- as arguments to `sort()`
    - function 作为 `sort()` 函数的参数, 67
  - BEGIN**, *see* **BEGIN** block
  - disk, *see* disk blocks
  - labelled, parser for, 361
  - boolean “not” operator, 236
  - Boss, the 老板, 53
  - box**, definition in Linogram, 332
  - breadth-first search (BFS) 宽度优先搜索, 125, 132, 140–142
  - browsers 浏览器, 44
  - buffer 缓冲区, 241
  - bullet symbol 着重号, 294
  - Burke, Sean, x, xi, 19
  - bytes 字节, 13–14
- C**
- C programming language; C 编程语言, ix, 44, 49, 52, 69, 71, 100, 109, 230, 241, 243, 283, 335
    - auto variables in 自动变量, 4
    - for** loop, 114
    - library of 库, 100, 101
  - C++ programming language; C++ 编程语言, 17
  - /c regex modifier flag, 244
  - cache data, expiration of 缓存数据的到期, 64
  - cache hit 缓存命中, 42, 59, 68, 70
    - false 错误的, 55, 70
  - cache management overhead 缓存管理的开销, 42, 57, 66, 71
  - cache memory 缓存内存, 44, 71
  - cache miss 缓存脱靶, 42, 59, 62, 70
  - caching and memoization 缓存和记忆术, 41
    - alternatives to 可供选择的, 66–71
    - benefits of speed 速度的好处, 71–74
    - caveats 警告, 52–55
    - evangelism 传播福音, 71
    - inline caching 内联缓存, 43–44
    - in object methods 在对象方法里, 62–64
    - key generation 键的生成, 55–62
    - Memoize** module, 45–52
    - persistent caches 持续的缓存, 65–66
    - quantitative analysis of 定量的分析, 42, 54–55, 59, 66
    - and recursion 和递归, 42–43
  - calculator 计算器, 35–40, 267, 283–285, 290, 313
  - calculus 微积分, 201, 204, 210, 213
  - call frame 调用框架, 153–154
  - call tree 调用树, 142–143, 146
  - callbacks 回调, 7, 13–16, 78, 83–84, 93–94, 103, 105, 119–120, 124–126, 149, 151, 218, 247, 258
  - caller()** function, 280
  - canonical form 规定形式, 144–145
  - canonical order 正规的次序, 233
  - cantankerous grandfather 坏脾气的爷爷, 151
  - cardioid 心脏线, 327
  - Carp** module, 122, 348, 355, 372
  - carriage return 回车, 293
  - carrot, 106, 175, 184
  - CGI, 125, 130
  - CGI::Push** module, 102
  - chained lexers 链式词法分析器, 245–249
  - character classes 字符类, 182, 187
  - CHDIR** directive in configuration file, 27
  - chdir()** function, 27
  - Christiansen, Tom, ix, 84
  - chromosome 染色体, 88
  - chronological order 时间次序, 67–69, 98
  - CIA, 122
  - circle**, definition in Linogram, 333
  - clauses in grammars 语法中的条款, 251
  - cleverness 才智, 139
  - clock, memoized 带记忆的时钟, 54
  - clone** method in **URI::URL**, 132
  - closedir()** function, 10
  - closure 闭包, 50, 80, 217
  - closure property 闭包属性, 49–51
  - closure operator (\*) 闭包算符, 181, 191
  - cmp** operator, 69
  - CMYK, 41
  - code reference 代码引用, 6–7, 27, 58, 104, *see also* cosure, anonymous function
  - code value (CV), 49–50
  - coefficient 系数, 211, 334, 339
  - college student, penurious 穷大学生, 136
  - comma-separated list 逗号分割的列表, 361, 370
  - comparator function 比较器函数, 66–67, 194–195, 233
  - compiler 编译器, 37
  - comp.lang.perl.misc** newsgroup, 181
  - components 组成部分, 18
  - compound interest 复利, 207–209
  - compromise 折中, 56
  - compulsive behavior 难以抑制的行为, 303
  - concatenate()** operator, 265–266
  - concatenation 组合/连接, 2, 181–182, 258
    - of parsers, 258
    - of regexes, 181–182
  - configuration table 配置表, 27, 30
  - CONSTANT** object, 343–345
  - constant part of equation 方程的常数部分, 334–336
  - constants 常数, 323
  - constraint networks 约束网络, 326
  - constraint systems 约束系统, 315
  - Constraint** class, 342
  - constraints** section in Linogram specification, 366–367
  - Constraint\_Set** class, 343
  - \_content** key in **HTML::TreeBuilder**, 18
  - context 上下文, 68, 77, 104, 108, 120–121, 126, 128
    - Linogram evaluation environment, 371–373
  - continuation 续篇, 305–308
  - control-backslash character 控制—反斜杠字符, 55
  - conversion, decimal to binary 转换, 十进制到二进制, 1–2
  - core dump, 49
  - cos()** function, 209–210, 213
  - cosh()** function, 213
  - cost-benefit ratio 付出—回报比, 72
  - counting process 数数过程, 85–86
  - CPAN, 69, 99, 216, 334
  - CPU, 44
  - crab cakes 蟹肉蛋糕, 54
  - current matching position of scalar 标量的当前匹配位置, 244–245
  - Curry, Haskell B., 218
  - currying, 217–221, 227–229, 231, 234, 236, 323
  - custom key generation 定制的键生成, 62
  - cutsorting 切断排序, 192–200
    - log files 日志文件, 195–200
  - cutting function 切断函数, 194
  - CV (code value), 49–50
  - cwd()** function, 30
  - Cwd** module, 30
- D**
- d** operator, 81
  - dangling symbolic link 悬空的符号链接, 13, 16, 121, 217
  - database handle 数据库句柄, 92

- database query languages 数据库查询语言, 315
  - database-query parsing 数据库查询解析, 299–304
    - overview 概况, 299
    - lexer 词法分析器, 299–301
    - parser 解析器, 301–304
  - databases 数据库, 234–238, 299–304
    - of cached values 缓存值的, 65–66, 73
    - flat 纯文本, 91–100
    - SQL, 107–111
  - Data::Dumper** module, 262
  - data structure 数据结构, 55, 362
  - date format, ISO 日期格式, ISO, 69
  - DB\_File** module, 65
  - DBI** module, 107–110, 114
  - DBM**, 66, 233
  - dead ends 死胡同, 125
  - debugger 除错器, 101–102
  - debugging 除错, 101–102, 277–278, 286, 317, 320, 367
  - decimal to binary conversion 十进制到二进制转换, 1–2
  - declarative programming 声明式编程, 315–375
    - overview 概况, 315
    - linear equations 线性方程, 326–327
    - local propagation networks 本地传播网络, 315–326
      - overview 概况, 315–317
      - implementing 实现, 317–325
      - problems with 问题, 325–326
  - declarator in Linogram, 364, 365
  - default action for dispatch table 分配表的默认行为, 34–35
  - Defenestration of Prague 布拉格的扔出窗外事件, 134
  - defined** operator, 110
  - depth-first search, *see* DFS
  - derivation of sentence 句子的推导, 251
  - derivative function 导函数, 203–204, 213, 214, 220
  - DESTROY** method, 63
  - destructive function 破坏性的函数, 59, 174, 197
  - destructive method 破坏性的方法, 338
  - DFS 深度优先搜索, 124, 132, 134, 140–142, 151–152, 255, 269
    - ambiguity of 歧义, 152
    - bound on size of agenda 待办清单的尺寸限制, 140
    - contraindications for 禁忌, 140–141
    - recursion and 递归, 82, 124, 134, 141, 143
    - web spiders and 网页抓取, 141
  - diagnostic messages 诊断消息, 27, 133, 173, 318
  - diamond**, definition in Linogram, 334
  - die()**, throwing exceptions with, 287
  - differential calculus 微分学, 203, 213
  - Dijkstra, Edsger Wybe, 145
  - directives 指示, 29–30
  - directory tree 目录树, 80, 106
  - directory walking, applications and variations of 目录遍历, 应用和变化, 11–16
  - dirhandles 目录句柄, 9–10, 77
  - disk blocks 磁盘块, 10
  - diskettes 软盘, 136
  - dispatch tables 分配表, 27–40, 293, 343–345, 347, 352, 368
    - overview 概况, 27
    - advantages of 优势, 29–32
    - calculator 计算器, 35–40
    - configuration file handling 配置文件处理, 27–35
    - default actions 默认行为, 34–35
  - division as inverse of multiplication 除法是乘法的逆运算, 323, 343–345
  - division by zero 除以零, 288, 322, 345
  - division of power series 幂级数的商, 214–216
  - division of treasure, *see* partition problem
  - do-it-yourself, 82
  - do-while** loop, 162
  - domain name server 域名服务器, 44, 71
  - doorbell 门铃, 258
  - drand48()** function, 100–101
  - draw** section in Linogram specification, 367–369
  - drawables 可绘制的, 358–359, 367, 369
  - drawables list 可绘制列表, 369
  - drawing function 绘制函数, 330–331, 358, 374
  - drunken fraternity brothers 喝醉的好兄弟, 102
  - du** command in Unix, 11
  - duration (of value) (值的) 有效期, 47–49
- ## E
- e** command line option, 98
  - e** operator, 13
  - each()** operator, 120, 233
  - \$elementfunc** argument, 20, 38–40
  - email 电子邮件, 195–196, 241–242
    - address 地址, 35, 196
    - header of 头部, 241–242
  - empty list 空列表, 16, 24, 109, 118, 231–232, 257
  - empty string 空字符串, 182, 190, 248, 292, 341
  - end tag in HTML; HTML 中的结束标签, 17
  - Engineering Mathematics Handbook*, 216
  - entropy 无序, 102
  - environment 环境, 50
  - Environment** class, 359–360
  - epoch format 纪元格式, 197
  - eq** operator, 111, 302
  - Equation** class, 334–341
  - Equation::System** class, 339–342
  - equations,
    - for Fibonacci numbers, 23
    - inconsistent 前后矛盾的, 340
    - linear 线性的, 326–343
    - redundant 多余的, 339
    - roots of 根, 201
    - solving 解, 200
    - trivial (0=0), 336
  - equivalence classes 等同类, 145
  - error diagnosis and recovery in parsing 解析中的错误诊断与矫正, 285–290
  - escape sequence 转义序列, 55
  - eta-conversion, 292
  - Euclid's algorithm, 153
  - eval** operator, 30, 56–58, 226, 227, 287, 362
  - exaggeration 夸张, 23
  - exceptions 例外, 287–290
    - propagation of 传播, 288
  - execute** method in **DBI** module, 110
  - EXHAUSTED** operator, 113–114
  - exhaustion 耗尽, 107, 124, 137–138, 195, 233, 243, 247, 286, 306
    - explicit function for 明确的函数, 112–114
    - synthetic representation of 人为的表示, 110–114
  - exists()** operator, 70
  - exp()** function, 213
  - expiration of cache data 缓存数据的到期, 64
  - explicit exhaustion function 明确的耗尽函数, 112–114
  - explicit specification of empty list value, 231
  - explicit stacks 明确的栈, 161–169
  - exponentiation operation 求幂操作, 283

**Expression** class, 369  
 expression parser 表达式解析器,  
 36–37, 250, 254–256, 261–277  
 expressions 表达式, 251–253  
 in Linogram, 369–373

## F

**-f** operator, 9  
**@F** special variable, 98  
 factor of arithmetic expression 算术表  
 达式的因子, 263  
 factorial function 阶乘函数, 2–4, 160,  
 209–210, 216  
 fame and renown 声誉与名望, 277  
 family tree 家族树, 327  
**Fcntl** module, 93  
 features in Linogram, 327–332, 347,  
 352–358  
 Fenchurch, 54  
**FETCH** method, 121–122  
**fetchrow\_arrayref** method in  
**DBI** module, 108, 110, 114  
 Fibonacci numbers, 22–23, 42, 43,  
 162–169  
 eliminating recursion from  
 calculation of 从计算中移除递  
 归, 162–169  
 fields in email message header 电子邮  
 件消息头部的段落, 242  
 fields in flat text database 纯文本数据  
 库的字段, 91, 97, 98  
**File::Basename** module, 126  
**File::Find** module, 82  
**File::ReadBackwards** module,  
 99  
 file system 文件系统, 8, 17  
 filehandle 文件句柄, 75–76, 123  
 as iterator 作为迭代器, 75–76  
 iterator interface to 迭代器界面, 91  
 reading in **while** loop 在  
**while**循环中读取, 123  
 tied 系住的, 123–124, 199  
 files 文件, 8–9, 12, 16, 54  
 configuration 配置, 27–34  
 for persistent caching 持续的缓存,  
 65–66  
 GIF, 41  
 INI, 76  
 log 日志, 97–100, 195–200  
 with octopuses 含有章鱼, 106  
 with plutonium 含有钚, 75–76  
 filters and transforms 过滤和变换,  
 103–106  
 fishing expedition 钓鱼, 72  
 flat databases 纯文本数据库, 97, 302  
**FlatDB** module, 91–100, 238, 299

**FlatDB::Iterator** module,  
 98–100  
 flat-file database 纯文本文件数据库,  
 91–97  
 floating-point numbers 浮点数, 204,  
 205  
 flow chart 流程图, 103  
 foolishness 愚蠢, 52  
 forcing the promise 推动断言, 172,  
 179  
**for** loop, C-style, 114  
**foreach**, using to loop over more  
 than one array, 117–120  
**fork** () function, 53  
 Fortran, 4  
 four-dimensional beings 四维生物, 346  
 fractions 分式, 153  
 fragment of URL, *see* anchor  
 component  
**FreezeThaw** module, 55  
 Frege, Gottlob, 218  
 Frequently Asked Question, 1, 11, 84  
 fruit 水果, 156  
 function calls, implementation of 函数  
 调用的实现, 152  
 function factory 函数工厂, 45–46,  
 131, 172, 217, 257, 271  
 functional vs. object-oriented  
 programming 函数式编程 vs.  
 面向对象编程, 17  
 functions,  
 custom key generation, for impure  
 functions 为非纯函数定制的键  
 生成, 62  
 higher-order 高阶, 217, 222  
 that return references 返回引用的,  
 53–54  
 very fast functions 非常快的函数,  
 54–55  
 whose return values do not depend  
 on their arguments 返回值不依  
 赖于参数, 52–53  
 with reference arguments 带有引用  
 参数的, 61  
 with side effects 有边界效应的, 53

## G

**\G** regex metacharacter, 244  
**/g** regex modifier flag, 244  
 garbage collection 垃圾回收, 47, 50,  
 52  
 Gaussian elimination 高斯消元法,  
 334, 336–342  
 GCD (Greatest Common Divisor) 最大  
 公约数, 153  
 geeks 爱好者, 207  
 General Electric 通用电气, 45

generic-operator parsers 通用操作符  
 解析器, 275–277  
 Genomic sequence generator 基因组序  
 列生成器, 88–91  
**getc** () function, 123  
**get\_links** method of  
**HTML::LinkExtor** module,  
 125–126  
 GIF file, 41  
 globs, 123, 220  
**glob** () operator, 77  
 global filehandle 全局文件句柄, 31  
 global variables 全局变量, 3–4, 30, 32,  
 93, 176, 230, 280, 303  
 effect on recursion 于递归的效果,  
 3–4, 9–10  
 filehandles as 作为文件句柄, 9–10  
 hashes instead of 替以散列, 33  
 random number generator as 作为  
 随机数生成器, 102  
 Goff, Jeff, 144  
 golden ratio 黄金比例, 23  
**golden\_rectangle**, definition in  
 Linogram, 333  
**goto**, 154, 162, 311  
 grammar 语法, 250–254  
 Grasshopper, 124–133  
 greatest common divisor (GCD) 最大  
 公约数, 153–155  
**grep** () function, 222–223  
 grocery bags 杂货袋, 24

## H

hack, 55  
 hairy code 可怕的代码, 276  
 Hall, Joseph, 70  
 Hamming problem, 179–181  
 Hamming, Richard W., 179  
 hash 散列, 13–16, 18, 26, 33, 43, 55,  
 58–59, 73, 132, 156, 197, 320,  
 330–331, 341, 346, 374  
 cache 缓存, 41–43, 45–46, 62–63,  
 66  
 as dispatch table 作为分配表, 29  
 for canonicalizing value 为了规范  
 值, 145  
 iterator component of 迭代器成分,  
 77, 120  
 power set of 幂集合, 156–157  
 tied 系在/关联, 66, 277  
 hash key 散列键, 55, 61, 63  
 hash slice 散列的片段, 94  
 hash value computation 散列值的计  
 算, 55  
 head of linked list 链表的头部, 170  
 header of email message 电子邮件消  
 息的头部, 241

header of flat-file database 纯文本文件数据库的头部, 91

headers of HTML document; HTML 文档的头部, 20

hexadecimal 十六进制, 63

hierarchical data 层次化数据, 8–11

Hietaniemi, Jarkko, 156

high school 高中, 200, 208, 327

higher-order functions 高阶函数, 217, 222

    currying, 217–238

**reduce ()** and **combine ()**, 229–234

**hline**, definition in Linogram, 331

Hoefler, Jonathan, 134

Hoefler Type Foundry; Hoefler 铅字厂, 134

hook 钩子, 112, 124, 133, *see also* callback

HTML, 17–22, 38–40, 118, 124–125, 217–218

**HTML::LinkExtor** module, 124, 125

**HTML::TreeBuilder** module, 18–19

HTTP, 98

**httpd** log file, 97–98

Human Genome Project 人类基因组项目, 88

hyperlinks 超链接, 124–130, 132, 141

## I

**if-else** tree, 27–28, 37, 39, 163

impure function 非纯函数, 62

**INCLUDE** directive in configuration file, 32

incrementing numerals 增大数字, 86

India 印度, 199

infinite loop 无限循环, 76, 205, 269, 318, 338

infinite sequence of integers 无限的整数序列, 173

infinite streams 无限流, 170–216

    overview 概况, 170

    hamming problem, 179–181

    lazy linked lists 惰性链表, 171–175

    Newton-Raphson method, 200–209

    power series 幂级数, 209–216

    recursive streams 递归流, 175–179

    regex string generation 正则字符串生成, 181–200

infix form of expression 表达式的中缀式, 36

ingenuity 独创性, 44

INI file, 76

inline caching 内联缓存, 43–44

inlined cache manager, with argument normalizer 内联的参数归一化的缓存管理, 59–60

inlining 内联, 57–60, 70

internal stack 内部的栈, 82

intrinsic constraints 内在的约束, 347–348

**Intrinsic\_Constraint\_Set** class, 348

*Introduction to Functional Programming*, x

i-number, 196

investment banking 投资业, 62–64, 70

IOU, 173

IRC, 11, 181

**is\_in ()** example, 61

**isa** method, 57

ISO date format; ISO 日期格式, 69

iteration, C model of; C 的迭代模型, 114

iterators 迭代器, 75–133

    overview 概况, 75

    alternative interfaces to 可选的界面, 116–124

    converting recursive functions to 转换递归函数到, 134–169

    examples 实例, 82–103

    exhaustion of 耗尽, 79

    filehandle iterators 文件句柄迭代器, 91

    filters and transforms of 过滤和变换, 103–106

    flat-file database 纯文本文件数据库, 91–97

    genomic sequence generator 基因组序列生成器, 88–91

    homemade 自制, 78–82

    introduction 介绍, 75–77

    kicking 踢, 79, 103, 105, 122, 129

    for permutations 排列, 83–88

    random number generators 随机数生成器, 100–103

    rewinding 倒回, 170

    searching databases backwards 反向搜索数据库, 97–100

    semipredicate problem 半谓词问题, 107–116

    web spiders 网页抓取, 124–133

## J

jargon 行话, 251

Junko, 54

## K

**KEEPER** label for HTML elements, 20–21, 217

key generation 键的生成, 55–62

    overview 概况, 55–58

    functions with reference arguments 带有引用参数的函数, 61

    partitioning 划分, 61–62

key-generation method 键生成方法, 56

**keys ()** function, 77

kicking an iterator 踢迭代器, 79, 103, 105, 122, 129

Kleene closure, 181

Knuth, Donald E., 101, 206

## L

**-1** operator, 13

labeled block 贴标签的块, 361

Latin 拉丁文, 52, 137

laws of programming 编程的法则, 28

lazy linked lists 惰性链表, 171–175

left-associative operator 左结合操作符, 284

left recursion 左递归, 267–273

left-recursive grammar rules 左递归语法规则, 269

Leler, Wm, xi

lemniscate 双扭线, 327

Leonardo of Pisa (Fibonacci), 22

lexer, Perl's; Perl 的词法分析器, 301

lexers 词法分析器, 243–250, 295, 299–301, 360–361

    overview 概况, 239–240

    chained 链式的, 245–249

    emulating **<>** operator 评估 **<>** 操作符, 240–243

    peeking 偷看, 249–250

lexical analysis, *see* lexers

lexical closure 词法闭包, 49

lexical filehandle 词法文件句柄, 31

lexical variables 词法变量, 44, 60, 279

lexicity, 47

lexing, *see* lexers

**line**, definition in Linogram, 330

linear equations 线性方程, 326–327

linked lists 链表, 170–171

    head 头部, 170

    lazy 惰性, 171–175

    splicing into 拼接, 171

    tail 尾部, 170

linogram, 327–334

    overview 概况, 327–334

    equations 方程, 334–343

    feature types 特征类型, 354–360

    missing features 缺失的特征, 373–375

    parser 解析器, 360–373

    overview 概况, 360–361

    declarations 声明, 363–369

    definitions 定义, 363–363

    expressions 表达式, 369–373

- required extensions 需要的扩展, 361–362
  - programs 程序, 362–362
  - scalar types 标量类型, 354–355
  - %TYPES**, 362
  - values 值, 343–354
    - overview 概况, 343–345
    - constant values 常数, 345–345
    - feature values 特征值, 347–347
    - feature-value methods 特征值方法, 352–354
    - intrinsic constraints 内在的约束, 348–348
    - synthetic constraints 综合的约束, 348–352
    - tuple values 元组值, 345–347
  - Lisp programming language; Lisp 编程语言, ix
  - list assignment as condition 条件里的列表赋值, 109
  - list context 列表上下文, 68, 77, 104, 108, 120, 126, 128
  - list expressions 列表表达式, 260
  - List::Util** module, 229–232
  - literal regexes 字面正则, 182
  - local()** operator, 93, 105, 204
  - local propagation networks 本地传播网络, 315–326
    - overview 概况, 315–317
    - implementing 实现, 317–325
    - problems with 问题, 325–326
  - log files 日志文件, 97–100, 195–200, 232–233
  - log()** function, 213
  - LOGFILE** directive in configuration file, 27
  - lookahead assertions 前瞻断言, 293
  - lookbehind assertions 后顾断言, 293
  - loop control operators 循环控制操作符, 162
  - love and admiration 喜爱并钦佩, 11
  - ls** command in Unix, 11
  - ls -R** command in Unix, 11
  - Lucas, Edouard, 4
  - Luke the Hermit, 70
  - LWP::Simple** module, 124–125, 333
- ## M
- M** operator, 54
  - m//g** operator, 77
  - Macdonald, John, 156
  - Macintosh, 136
  - magic variable 魔幻变量, 121, 123
  - mailto** URL, 132
  - maintenance programmers 维护程序员, 57
  - make\_counter** example, 50–52
  - malloc()** function, 109
  - map()** function, 81, 103–104, 174, 222–224, 230, 265, 348, 349
  - Marshall, Edward Waite, 45
  - marshalling, 45
  - mask function 面具函数, 112–114
  - Mastering Algorithms with Perl*, 156, 195
  - Math::BigFloat** (multiprecision floating-point library), 205, 290
  - Math::BigRat** module, 216
  - Math::Complex** module, 290
  - mathematics geeks 数学爱好者, 207
  - matrix transformations 矩阵变换, 334
  - max()** function in **Scalar::Util** module, 229–230
  - maxstr()** function in **Scalar::Util** module, 229
  - MAYBE** label for HTML elements, 20–21, 217
  - meaning of parsed input 解析的输入的意义, 250
  - Memoize** module, 45–52, 54, 69
  - memoization, *see* caching and memoization
  - memoized clock 带记忆的时钟, 54
  - merging streams 合并流, 180–182
  - Michie, Donald, 45
  - min()** function, 229
  - minstr()** function, 229
  - ML for the Working Programmer*, x
  - monster module 怪物模块, 45
  - morphology 词法, 239–240
  - mortgage 按揭贷款, 207–209
  - Mozilla, 131
  - MSIE, 131
  - multiple-list iterator 多列表迭代器, 118
  - my** declaration, 3, 9, 44, 47–48
    - oddity in semantics of 语法中的古怪, 175
  - my** variable, *see* lexical variables
  - mystery 神秘, 122
- ## N
- \n** (newline) character, 241–242
  - n** command-line option, 98
  - %N** hash for naming parsers, 277–282, 312
  - nasty regex 令人不快的正则, 191
  - nasty surprises 令人不快的意外, 93, 152, 223
  - national security 国家安全, 122
  - network server 网络服务, 62
  - newline character 换行符, 174, 242, 294
  - newsgroups 新闻组, 11, 181
  - Newton, Isaac, 200
  - Newton-Raphson method, 200–209
  - nextval** method, 116
  - NEXTVAL** operation, 75, 78–79, 112–114
  - 90-10 rule, 72
  - nodes 节点, 140, 142–143, 149–152
    - in AST 抽象语法树中的, 263, 267
    - in **HTML::TreeBuilder** object, 18–19
    - of linked list 链表的, 170–175
    - in local propagation network 本地传播网络中的, 315–317
    - of notional tree of sentential forms 句式的概念树的, 253–255, 269
    - in outline structure 大纲中的, 295–296
  - non-reentrant 不可重入的, 4
  - nonterminal symbols 非终止符号, 251
  - normalization of equations 方程的标准化, 341
  - Norvig, Peter, ix, x
  - null function 空函数, 16
  - null pointer 空指针, 109
  - NULL** value in SQL databases, 107, 108
  - numerals, canonical form for 数字的规范形式, 145
- ## O
- O()* notation, 67
  - object constructor methods 对象构造器方法, 48, 53, 122, 123, 335, 345, 346, 352
  - object identity, testing with == 用 == 测试对象的等同性, 319
  - object methods, caching in 对象方法里的缓存, 62–65
  - object-oriented (OO) programming 面向对象式的编程, 17, 48, 62–64
  - octopuses 章鱼, 53–54, 83, 106
  - oddity 古怪的东西, 16, 175
  - odometer method 里程表方法, 86–87, 90
  - OO (object-oriented) programming, *see* object-oriented programming
  - open()** function, 75
  - opendir()** function, 9
  - operating system 操作系统, 44
  - operator overloading, *see* overloading
  - operator precedence 操作符优先级, 238, 248, 263, 276–277, 291, 311
  - optimization 优化, 53, 72–73, 112, 134, 138–139, 153, 160, 169, 214
  - option checking 选项检查, 133

- optional item, parser for, 361
  - orcish maneuver, 70
  - Orwant, Jon, 156
  - out of scope 作用域之外, 10, 47–49, 60, 175
  - outlines 大纲, 294–299
  - overload** module, 238, 312
  - overloading 重载, 238, 310–314
  - oxcart 牛车, 72
- P**
- pad 格子图, 48–50
  - Pair** objects, 313
  - palindromes 回文, 141–142
  - parabola 抛物线, 200–201
  - Paradigms of Artificial Intelligence Programming*, ix, x
  - param** declaration in Linogram, 373–375
  - parameter specifications in Linogram, 368
  - parameters 参数, 373–374
  - parentheses,
    - balanced 平衡的, 191–192
    - disambiguating expressions 消除表达式的歧义, 35, 38, 291
    - in output of parser 在解析器的输出里, 263, 265
    - in regex 在正则里, 243
  - parse** method in
    - HTML::LinkExtor**, 125
  - parser function 解析器函数, 368
  - parser operator 解析器操作符, 260
  - parser, Perl's, 104
  - Parser** module, 256
  - parsing 解析, 28, 76, 131, 132, 234, 239–314
    - overview 概况, 239
    - arithmetic expressions 算术表达式, 261–290
    - backtracking parsers 回溯解析器, 304–310
    - database-query parsing 数据库查询解析, 299–304
    - HTML, 18, 124–125
    - in general 一般的, 250–256
    - lexers 词法分析器, 239–250
    - Linogram specifications, 360–371
    - overloaded operators for 重载操作符, 310–314
    - recursive-descent parsers 递归下降解析器, 256–261
    - regexes 正则, 290–294
  - partial sums 部分和, 211
  - partition problem 划分问题, 24–26, 61–62
  - partitioning 划分, 24–26, 61–62
  - partitions of an integer 整数的划分, 144–150
    - comparing 比较, 148
  - pathfinder.com**, 130
  - patterns 模式, 85, 88, *see also* regexes
  - Paulson, Lawrence, x
  - penurious college student 穷大学生, 136
  - performance 性能, 41, 52, 61, 69, 72, 221, 303
  - period of random-number generator 随机数生成器的周期, 101
  - Perl 6, 116
  - Perl interactive debugger; Perl 交互式的除错器, 277
  - perldoc** program, 74
  - permutations 排列, 2–3, 83–88
  - persistent caches 持续的缓存, 65–66
  - pi ( $\pi$ ), 212–213
  - pic** program, 375
  - pipe 管道, 76
  - plain text 普通文本, 17
  - plumber 水暖工, 136
  - plutonium 钚, 62, 75
  - point**, definition in Linogram, 330
  - polymorphism 多态性, 220
  - pop, 82
  - POPDIR** directive in configuration file, 30
  - pos ()** function, 244
  - postfix form 后缀式, 36
  - postprocessing function 后处理函数, 363
  - PostScript, 330, 331
  - power series 幂级数, 209–216
    - overview 概况, 209–213
    - derivatives 导数, 213
    - symbolic computation 符号计算, 213–216
  - power series expansion 幂级数展开, 209–216
  - power set 幂集合, 156
  - powers of 2, 176–179
  - Prague, Defenestration of 布拉格的扔出窗外事件, 134
  - precedence 优先级, 238, 291, 311
    - in arithmetic expressions 算术表达式中的, 263, 277
  - predicate function 谓词函数, 70
  - preprocessor 预处理器, 90
  - primitive features in Linogram, 328
  - print ()**, as expression, 283
  - print** statement, 6, 277
  - printer 打印机, 41
  - printf ()** function, 13
  - priority queue 优先级队列, 149, 151
  - private variables, *see* lexical variables
  - probability 概率, 42
  - productions in grammars 语法中的产品, 251
  - profiler 剖析器, 72
  - profiling 剖析, 72–74
  - Prolog programming language; Prolog 编程语言, 315
  - promise 断言, 171–172
    - forcing 推动, 172, 179
  - propagation network 传播网络, 324–325
  - prototypes 原型, 104, 117, 118, 157, 195, 203, 225–229
  - proxy server 代理服务器, 71
  - pruning 修剪, 141, 253–255, 269
  - pseudo-random 伪随机的, 100
  - pun 双关语, 79, 249
  - punctuation, excessive 过多的标点符号, 94
  - pure functions 纯函数, 54
  - pure virtual methods 纯虚方法, 17
  - push ()** function, 82
  - PUSHDIR** directive in configuration file, 30
- Q**
- q{...}** syntax, 57
  - qmail** mail system, 196
  - quantification of regexes 正则的量化, 291
  - queue 队列, 80–83, 124, 127–128, 133
  - queue members 队列成员, 127
  - qw (...)** syntax, 98
- R**
- rabbits 兔子, 22–23
  - rand ()** function, 100
  - random ()** function, 100
  - random number generation 随机数生成, 100–103
  - Raphson, Joseph, 200
  - readdir ()** function, 77
  - READLINE** method, 123
  - reciprocal 倒数, 344–345
    - of power series 幂级数, 215–216
  - recursion 递归, 1
    - and caching 和缓存, 42–43
    - as DFS, 142–144
    - elimination of 移除, 152–169, 232
  - recursive-descent parsers 递归下降解析器, 256–261
    - overview 概况, 256
    - compound operators 合成的操作符, 259–261
    - parser operators 解析器操作符, 258–259

- very simple parsers 非常简单的解析器, 257–258
  - recursive streams 递归流, 175–179, 186, 215
  - redo**, 162
  - re-entrancy 重入, 4, 31–32
  - reentrant function 可重入的函数, 32
  - ref()** function, 58, 335–336
  - ref(\$base) | | \$base** technique, 335–336
  - refactoring 重构, 147–148, 156–159, 161, 166–169, 219
  - reference arguments, functions with 函数的参数是引用, 61
  - references 引用, 6–7, 13, 27, 40, 46–49, 57–58, 108, 312, 335, 369
    - comparing with == 用 == 测试, 111
    - from pad 来自格子图, 48–49
    - functions returning 函数返回, 53–54
    - functions accepting 函数接受, 61
    - stringification 字符串化, 58, 61, 111, 277, 312
  - referrer, fake, 128
  - referring URL, 127
  - regex engine 正则引擎, 77, 315
  - regex string generation 正则字符串生成, 181–200
  - regexes 正则, 77, 94, 181, 191, 240, 243–246, 290–294, 315
    - as examples of declarative programming 作为声明式编程的实例, 315
    - as lexers 作为词法分析器, 243
    - syntax 语法, 291
  - relaxation 放宽, 326
  - repetition of parser operation 解析器操作的重复, 260
  - return-value parameter 返回值形参, 160
